LETTER OF SUBMITTAL

THE COMMONWEALTH OF MASSACHUSETTS

OFFICE OF THE SECRETARY

DIVISION OF VITAL STATISTICS

Boston, December 20, 1963

To the Honorable Senate and House of Representatives:

I have the honor to submit herewith, as required by Chapter 46, Section 21, and Chapter 208, Section 47, of the General Laws, the one hundred and twenty-second annual report on statistics of births, marriages, deaths and divorces in Massachusetts for the calendar year 1963. Births, marriages and deaths are reported monthly; births, for each town and city containing not more than ninety thousand inhabitants, not later than sixty days, and each city containing more than ninety thousand inhabitants, not later than ninety days, following every month in which births occur; marriages, on or before the tenth day of the second month following the month in which marriages are solemnized; deaths, on or before the tenth day of every month; and divorces, annually, in February, for the last preceding calendar year.

The editorial review and the method of presentation of the statistical data were prepared by Raymond D. Lavallee, State Registrar, in charge of the Division of Vital Statistics. The statistical tables were prepared under the direction of Miss Margaret B. Hoff, Consultant. The exhibition of tabular results is restricted to such as are plainly of practical utility within the meaning of the statute by authority of which the tables are prepared.

Respectfully submitted,

KEVIN H. WHITE,

Secretary of the Commonwealth.

Vital Statistics of Massachusetts, 1963

Causes of death	4-5
Statistical tables	6-82

INTRODUCTION

History. Massachusetts was one of the first colonies to recognize the importance of the registration of vital statistics, and as early as 1639 required registration of births, marriages and deaths; in 1842 statutes required copies to be filed with the Secretary of the Commonwealth. In 1880 the registration area for deaths recognized by the United States Bureau of the Census, i.e., the States, and cities in other States, effectively enforcing satisfactory registration laws of all deaths registered, included but two States, Massachusetts and New Jersey, the District of Columbia, and a number of cities in nonregistration States.

Since 1841, over 5 million copies of death records have been filed in the Division of Vital Statistics. The original records are on file in the cities, towns and States in which the events occurred, and copies in the city and town given as the residence of the deceased at the time of death. Chapter 439, Acts of 1945, provides that in cases of burial of war veterans in a city or town other than the place of death or residence, a copy of the death certificate shall also be filed with the Clerk of the place of burial.

Source of Data. Mortality statistics are based upon original data obtained by the registration of deaths, which is accomplished by the filing of a standard death certificate with the local Board of Health.

The responsibility for seeing that a certificate is properly made out and filed rests with the undertaker, who is required by law to present a satisfactory certificate of death before he may obtain a permit to remove or bury a body. The local boards of health are required to transmit the death certificates to the city or town clerks who in turn record the deaths and are required to transmit certified copies to the Secretary of the Commonwealth on or before the tenth day of the month following that in which the deaths occurred. Hospitals and other institutions are required to obtain, when persons are received, the facts which are required for record in the event of the deaths of such persons. Chapter 604, Acts of 1949, relates to the burial or other disposition of the bodies of veterans.

Importance of Death Records. Death certificates are used to prove:

1. The fact of death, for life insurance claims and for liquidation of estates;
2. Facts about the deceased such as circumstances and cause of death, date and place of interment, names of husband or wife and parents, age, sex and race;
3. Date of deaths, for settlement of pensions, insurance adjustments and general legal use.

Death certificates, and the mortality statistics derived from them, furnish essential information for program planning and evaluation in all areas of public health, and are indispensable in studies of population change. These records also form the basis for identification, study, and follow-up in clinical research.

Allocation. Deaths are charged to the place of event and also are allocated to the place of residence of the deceased. The usual place of residence has been used as a basis for all deaths occurring outside the State as well as for those in the State. For purposes of allocation former residents of Massachusetts who have died in other States, after an absence from Massachusetts of more than one year, are considered nonresidents. Residents of other States who have resided in Massachusetts for more than one year are considered as residents except in the case of inmates of institutions and jails.

Number of Deaths and Death Rates. The number of deaths occurring in Massachusetts during the calendar year 1963 was 58,612. Deaths of residents of Massachusetts numbered 58,606. Based on an estimated population of 5,296,000, these deaths correspond to a rate of 11.1 per 1,000 inhabitants.

Of the 58,606 resident deaths in 1963, 30,978 or 53 per cent were males. The proportion of males in the living population as shown by the United States Census of 1960 was 48 per cent.

The number of deaths (allocated) of infants under one year of age was 2,436, and the infant death rate per 1,000 allocated live births was 21.9. In comparison, the infant death rate per 1,000 live births for the United States in 1963 was 25.2. Infant death rates per 1,000 live births in municipalities in the Commonwealth having over 15,000 inhabitants in 1960 are given in Table 24. The trend in infant mortality is shown in Table 9.

Causes of Death. It should be borne in mind that the process of classifying the thousands of different medical terms under the 600 or more titles of the International List of Causes of Death presents many difficulties which are seldom fully appreciated by those who have not engaged in the work of classification. Even if each certificate of death received bore only a single cause, the process would present difficulties. Many certificates, however, bear statement of two or more causes and a system of selection, according to the precedents and rules of the Expert Committee of the World Health Organization, has been adopted by the United States and is used in the Massachusetts Division of Vital Statistics. Under this system, statistical compilations of causes of death are based on the selection of the underlying cause of death as stated by the certifying physician, except in instances where the order of entries on the death certificate is obviously erroneous. The death certificate permits the certifying physician or surgeon to signify the order of events leading up to death. This means that when two or more morbid conditions are given on a certificate one of them must be selected as the cause under which the death must be classified. Special weight has usually been given to communicable diseases, when combined with other causes, and assignments are made to external causes when serious enough to be considered the cause of death.

The comparability of mortality statistics from place to place and year to year is affected by differences in medical concepts, manner in which certifiers report cause of death, and method of selecting the cause of death from jointly reported causes. Changes in reporting practices result from progress in medical knowledge, and in general do not cause a noticeable break in continuity of trends. Changes in the classification scheme and method of selecting a single cause of death may have a marked effect on mortality tabulations however. The Sixth Revision of International Lists of Diseases and Causes of Death and the rules for selecting the cause of death which were adopted in 1949 introduced rather serious breaks in the continuity of mortality trends for a number of causes of death.¹ Beginning with 1958, the Seventh Revision of the International Lists of Diseases and Causes of Death was used in the assignment of causes of death. In general, the results of classification under this system differed very little from the results obtained using the Sixth Revision.²

The table below compares the mortality experience of the Commonwealth of Massachusetts with that of the United States in 1963 for principal causes of death. The table shows the actual number of deaths of residents of Massachusetts from each principal cause in 1963 and an "expected" number based on age specific death rates for the United States for the same year. The "expected" number of deaths shown for each cause is the number of deaths which would have occurred in Massachusetts if the population of the State had been subject to the age specific rates which prevailed in the United States as a whole.

DEATHS FROM PRINCIPAL CAUSES
Massachusetts, 1963

<i>Cause*</i>	<i>Number of Deaths</i>	
	<i>Actual</i>	<i>"Expected"</i>
All Causes	58,606	58,700
Major cardiovascular-renal diseases (330-334, 400-468, 592-594)	33,790	32,700
Malignant neoplasms (140-205)	9,716	9,100
Accidents (E800-E962)	2,423	3,100
Influenza and pneumonia, except of newborn (480-493)	2,823	2,300
Certain diseases of early infancy (760-776)	1,533	1,800
Diabetes (260)	928	1,000

*The title or titles of the Detailed International List that are included under each heading are shown by numbers in parentheses.

Although this method of comparison does not take into account differences other than age in the composition of the population of Massachusetts and the United States, the impact of the 1963 influenza epidemic in Massachusetts as compared to the United States as a whole may account for some of the difference between actual and "expected" deaths in the above table. It has been demonstrated in other epidemics that excess mortality from influenza and pneumonia is accompanied by an excess in mortality attributed to other causes, particularly to cardiovascular disease. This characteristic of an influenza epidemic can be seen in the above data. In contrast, accidental deaths in Massachusetts were lower than the estimate based on age specific rates for the United States. The differences appearing in this crude comparison point out mortality problems needing special study beyond the limits of this annual report. The excess mortality from malignant neoplasms is one of these problems.

776	Immaturity, unqualified	513	312	201
XVI.	SYMPTOMS, SENILITY AND ILL-DEFINED CONDITIONS	-	-	-
780-789	Symptoms referable to systems or organs	132	84	48
780	Certain symptoms referable to nervous system and special senses	6	4	2
.0	Coma and stupor	1	-	1
.2	Convulsions	5	4	1
781	Other symptoms referable to nervous system and special senses	4	4	-
.8	Encephalopathy	4	4	-
782	Symptoms referable to cardiovascular and lymphatic system	102	68	34
.4	Acute heart failure, undefined	96	65	31
.9	Shock without mention of trauma	6	3	3
783	Symptoms referable to respiratory system	7	4	3
.0	Epistaxis	2	1	1
.1	Hemoptysis	5	3	2
784	Symptoms referable to upper gastro-intestinal tract	5	3	2
.5	Hematemesis	5	3	2
785	Symptoms referable to abdomen and lower gastro-intestinal system	3	1	2
.2	Jaundice	2	1	1
.6	Diarrhoea, age 2 years and over	1	-	1
786	Symptoms referable to genito-urinary system	1	-	1
.1	Retention of urine	1	-	1
788	Other general symptoms	3	-	3
.8	Pyrexia of unknown origin	2	-	2
.9	Other specified symptoms not classifiable elsewhere	1	-	1
789	Abnormal urinary constituents of unspecified cause	1	-	1
.4	Hoematuria	1	-	1
790-795	Senility and ill-defined diseases	131	72	59
790	Nervousness and debility	1	-	1
.2	Depression	1	-	1
792	Uremia, unqualified	39	21	18
794	Senility without mention of psychosis	31	13	18
795	Ill-defined and unknown causes of mortality	60	38	22
.0	Other ill-defined conditions	5	1	4
.2	Sudden death (cause unknown)	6	5	1
.3	Found dead (cause unknown)	5	3	2
.4	Died without sign of disease	7	6	1
.5	Other, unknown and unspecified causes	37	23	14
XVII.	ACCIDENTS, POISONINGS AND VIOLENCE	-	-	-
800-802	Railroad accidents	9	9	-
800	Railroad accident involving railroad employee	3	3	-
802	Railroad accident involving other and unspecified person	6	6	-
810-825	Motor-vehicle traffic accidents	746	562	184

Detailed Int. List No.	Table 10 CAUSE OF DEATH.	ALLOCATED DEATHS (EXCLUSIVE OF STILLBIRTHS) FROM EACH CAUSE AND CLASS OF CAUSES, ACCORDING TO THE DETAILED INTERNATIONAL LIST, BY SEX: 1963.		
		Total	Males	Females
810	Motor-vehicle traffic accident involving collision with railroad train	3	2	1
812	Motor-vehicle traffic accident to pedestrian	219	165	54
813	Motor-vehicle traffic accident to rider of bicycle	3	3	-
814	Motor-vehicle traffic accident to rider or passenger of motorcycle, in collision with nonmotor vehicle or object	8	8	-
815	Motor-vehicle traffic accident to rider or passenger of motorcycle in collision with other motor vehicle	10	10	-
816	Other motor-vehicle traffic accident involving two or more motor vehicles	152	98	54
819	Motor-vehicle traffic accident involving collision with fixed or unspecified object	67	53	14
820	Motor-vehicle traffic accident while boarding and alighting	3	2	1
821	Motor-vehicle traffic accident to rider of motorcycle without antecedent collision	12	9	3
822	Motor-vehicle traffic accident involving overturning on highway	12	10	2
823	Motor-vehicle traffic accident involving running off highway	169	136	33
824	Other noncollision motor-vehicle traffic accident	14	8	6
825	Motor-vehicle traffic accident of unspecified nature	74	58	16
830-835	Motor-vehicle nontraffic accident	11	9	2
830	Motor-vehicle nontraffic accident to pedestrian	5	4	1
835	Motor-vehicle nontraffic accident of other and unspecified nature	6	5	1
840-845	Other road-vehicle accidents	6	6	-
840	Streetcar accident to pedestrian	4	4	-
843	Accident to rider of bicycle not involving collision with motor vehicle	2	2	-
850-858	Water-transport accidents	30	29	1
850	Drowning of occupant of small boat	26	25	1
851	Other water-transport injury by drowning	3	3	-
857	Other specified accidents in water transport	1	1	-
860-866	Aircraft accidents	18	14	4
860	Accident to personnel in military aircraft	5	3	2
861	Injury to occupant by accident to commercial "transport" aircraft	1	1	-
863	Injury to occupant by accident to other specified aircraft	4	4	-
866	Other and unspecified aircraft accidents	8	6	2
870-888	Accidental poisoning by solid and liquid substances	28	16	12
871	Accidental poisoning by barbituric acid and derivatives	12	6	6
872	Accidental poisoning by aspirin and salicylates	3	-	3
874	Accidental poisoning by other analgesic and soporific drugs	2	2	-
875	Accidental poisoning by sulfonamides	1	1	-
878	Accidental poisoning by other and unspecified drugs	1	1	-
880	Accidental poisoning by alcohol	2	2	-
882	Accidental poisoning by industrial solvents	1	-	1
883	Accidental poisoning by corrosive aromatics, acids and caustic alkalis	1	1	-
885	Accidental poisoning by lead and its compounds	2	1	1
886	Accidental poisoning by arsenic and antimony, and their compounds	1	-	1
888	Accidental poisoning by other and unspecified solid and liquid substances	2	2	-
890-895	Accidental poisoning by gases and vapors	17	12	5
890	Accidental poisoning by utility (illuminating) gas	3	1	2
891	Accidental poisoning by motor-vehicle exhaust gas	11	9	2
892	Accidental poisoning by other carbon monoxide gas	1	1	-
894	Accidental poisoning by other specified gases and vapors	2	1	1
900-904	Accidental falls	997	418	579
900	Fall on stairs	113	64	49
901	Fall from ladders	7	6	1
902	Other falls from one level to another	125	71	54
903	Fall on same level	362	119	243
904	Unspecified falls	390	158	232
910-936	Other accidents	535	354	181
910	Blow from falling or projected object or missile	19	17	2
911	Accident caused by vehicles	3	3	-
912	Accident caused by machinery	15	13	2
913	Accident caused by cutting and piercing instruments	4	4	-

Detailed Int. List No.	Table 10 CAUSE OF DEATH.	ALLOCATED DEATHS (EXCLUSIVE OF STILLBIRTHS) FROM EACH CAUSE AND CLASS OF CAUSES, ACCORDING TO THE DETAILED INTERNATIONAL LIST, BY SEX: 1963.		
		Total	Males	Females
914	Accident caused by electric current	5	5	-
915	Accident caused by explosion of pressure vessel	1	1	-
916	Accident caused by fire and explosion of combustible material	217	123	94
917	Accident caused by hot substance, corrosive liquid, and steam	9	8	1
919	Accident caused by firearms	8	7	1
921	Inhalation and ingestion of food causing obstruction or suffocation	47	27	20
922	Inhalation and ingestion of other object causing ob- struction or suffocation	6	5	1
923	Foreign body entering other orifice	3	2	1
924	Accidental mechanical suffocation in bed and crib	14	9	5
925	Accidental mechanical suffocation in other and unspeci- fied circumstances	7	6	1
928	Other accidents caused by animals	2	1	1
929	Accidental drowning and submersion	97	74	23

Measles (85)	-	7	-	6	-
Malaria (110-117)	-	-	-	-	-
Infectious hepatitis (92)	26	23	19	19	23
All other diseases classified as infective and parasitic (residual)	121	100	106	119	141
Malignant neoplasms (140-205)	9,716	9,943	9,704	9,626	9,319
Benign and unspecified neoplasms (210-239)	144	117	116	129	144
Diabetes mellitus (260)	928	989	930	971	922
Anemias (290-293)	101	174	74	69	85
Vascular lesions affecting central nervous system (330-334)	6,074	5,982	6,026	6,081	5,839
Nonmeningococcal meningitis (340)	89	71	74	89	88
Rheumatic fever (400-402)	11	17	22	12	25
Chronic rheumatic heart disease (410-416)	633	649	670	669	675
Arteriosclerotic and degenerative heart disease (420-422)	21,930	21,329	20,153	20,396	19,887
Other diseases of heart (430-434)	773	801	829	753	747
Hypertension with heart disease (440-443)	1,615	1,593	1,619	1,850	1,812
Hypertension without mention of heart (444-447)	417	340	338	376	340
Influenza (480-483)	70	24	12	78	31
Pneumonia (490-493)	2,753	2,541	2,205	2,647	2,185
Bronchitis (500-502)	220	195	107	179	123
Ulcer of stomach and duodenum (540, 541)	457	472	394	427	395
Appendicitis (550-553)	39	50	50	49	51
Intestinal obstruction and hernia (560, 561, 570)	336	360	345	304	311
Gastritis, duodenitis, enteritis, and colitis except diarrhea of newborn (543, 571, 572)	215	203	149	187	202
Cirrhosis of the liver (581)	843	883	863	878	794
Nephritis and nephrosis (590-594)	297	310	389	389	350
Hyperplasia of prostate (610)	91	101	102	100	103
Complications of pregnancy, childbirth and the puerperium (640-652, 660, 670-689)	20	21	17	27	22
Congenital malformations (750-759)	507	494	552	578	589
Birth injuries, postnatal asphyxia and atelectasis (760-762)	591	566	590	594	561
Infections of the newborn (763-768)	76	104	98	99	121
Other diseases peculiar to early infancy, and immaturity unqualified (769-776)	873	892	821	853	958
Senility without mention of psychosis, ill-defined and unknown causes (780-795)	263	277	350	239	186
Arteriosclerosis (450)	1,208	1,171	1,192	1,184	1,119
All other diseases (residual)	3,817	3,798	3,622	2,456	3,225
Motor-vehicle accidents (810-835)	757	737	608	600	592
Railroad accidents and injuries (800-802)	9	7	6	21	16
Air-transport accidents (860-866)	18	11	19	39	10
Burns (fire, explosion, scalds, conflagration, etc.) (transport accidents excepted) (915-917)	227	205	195	196	165
Accidental drowning (850, 851 929)	126	136	153	123	149
Accidental falls (transport accidents excepted) (900-904)	997	1,000	1,041	1,020	1,120
All other accidents	289	280	294	315	321
Suicide and self-inflicted injury (963, 970-979)	476	408	442	421	409
Homicide and operations of war (964, 965, 980-985, 990-999)	106	83	74	64	56

INTRODUCTION.

Birth Registration. — Birth registration has been compulsory in Massachusetts since Colonial times. It was one of the first States to be included in the registration area of the United States Census Bureau.

The physician* in attendance at the birth of a child is required, within forty-eight hours, to give notice and make a complete return within fifteen days of the facts required for record to the clerk of the town of birth. Parents, within forty days are required to give notice to the registration official of children born to them.

In addition to the above, persons in charge of a hospital, or other institution, public or private, are required to give, on or before the fifth day of each month, notice to the town clerk of every birth occurring among the persons in such institution during the preceding month. The law also provides that the clerk of each town may annually in January ascertain the facts required for record of all children born in his town during the preceding year and resident therein.

Returns are made in the first instance to the local clerks of the city or town in which the birth occurred with the exception of Boston where the City Registrar is the official in charge.

The records on file in the Division of Vital Statistics are attested copies of the originals filed with local officials. The law has required the filing at this central record office since 1841.

Importance of Birth Records. — Records of birth are becoming more important every day. Government and other agencies are demanding proof of citizenship through birth certificates. This has caused a tremendous increase in the issuance of certified copies of birth records. The applications for certified copies are being made in person and by mail from all parts of the country. As Massachusetts is one of the few states that have records previous to 1912 there is a great demand at all times. This great demand for birth records will continue as they are also required for Old Age Assistance, Social Security and for allotment purposes.

Birth certificates are used as evidence:

1. To prove the age and legitimacy of heirs;
2. Of age to determine the validity of a contract entered into by an alleged minor;
3. To establish age and proof of citizenship and descent in order to vote;
4. To establish the right of admission to the professions and to many public offices;
5. Of legal age to marry;
6. To prove the pension claims of widows and orphans;
7. To determine the liability of parents for the debts of a minor;
8. In the administration of estates, the settlement of insurance and pensions;
9. To prove the irresponsibility of children under age for crime and misdemeanor, and various other matters in the criminal statute;
10. In the enforcement of laws relating to education and to child labor;

*Midwives are not recognized in Massachusetts. The courts have held that the practice of midwifery is the practice of medicine, and as there is no provision under the law for licensing midwives, any one who practices midwifery is violating the medical registration laws.

11. To determine the relations of guardians and wards;
12. Of citizenship in order to obtain a passport;
13. In the claim for exemption from or the right to jury and military service.

Copies of records of births occurring during the preceding year are required by statute to be forwarded annually to the Division of Vital Statistics but many of the clerks co-operate with the Division by making periodic returns during the year.

After the statutory period has elapsed for filing copies of the records with the Department of the Secretary of the Commonwealth, no delayed returns are accepted unless by affidavit made by the parents, supported by written evidence at the time of birth, or by affidavit of the attending physician at the time of birth, or based upon a writing made at the time by a person since deceased charged with making the return in the first instance, except that in cases of delayed returns when no deponent is available the clerk may under the provisions of Chapter 542, Acts of 1945, accept a return without affidavit on written evidence satisfactory to him and if he rejects an affidavit for filing a delayed return, the person concerned can appeal to a Probate Judge in the county in which the birth occurred, and if the Probate Judge orders the birth to be recorded, the clerk is then required to make a record of the birth.

As the evidential value of a record depends for its authenticity upon the fact that it is made contemporaneously with the happening of the event recorded, the registrars are required to exercise considerable care by requesting written evidence made soon after the time of birth before accepting delayed returns, particularly if it is some years after the birth occurred. This holds true of corrections which can only be made in accordance with the facts as they actually existed at the time the birth occurred, with the exception of an illegitimate child who is legitimized through the subsequent marriage of its parents; in these cases the record may be amended, so that the child will appear on the record as the legitimate offspring of its parents.

As a means of eliminating errors from physicians' returns of births, Chapter 434, Acts of 1941 requires that registrars send a supplemental report of the physician's return to the parents for their verification; and when the certificate is returned properly signed by a parent it is filed with the physician's certificate. This system eliminates any claim later that an error has been made in the return of birth.

Adoptions. — Chapter 97, Acts of 1938 amended the statute relating to adoptions and provides that legally adopted children may have their birth records amended so as to appear as the natural children of the adoptive parents. Illegitimate children who have had their names legally changed may have their birth records amended to agree with the name decreed by court.

Certain Records Impounded. — Returns and records of illegitimate and abnormal sex births are impounded by statute from inspection. The law prohibits the issuance of copies of such records to the general public. These records can be inspected by or copies issued only to the child, the mother, attorney for the child, its legal guardian or to others by order of the court. Chapter 65, Acts of 1945 provided that in cases of illegitimate records which have been amended to appear as legitimate records through intermarriage of the parents or by adoption, no notation shall appear on certified copies that are issued that amendment has been made. This is a further protection to the illegitimate child.

Treatment of Infants' Eyes after Birth. — Chapter 46, Acts of 1943 requires attending physician to record on the birth certificate the use of a prophylactic remedy with which he has treated the eyes of a child whose birth he has personally attended.

Allocation. — Births are charged to the place of the event and also are allocated to the place of residence of the parents. The usual place of residence has been used as a basis for all births occurring outside the State as well as for those in the State. In the case of institutions, births have been allocated to the place of residence before entrance.

Live Births and Birth Rate.—In the Commonwealth in 1963 there were 113,122 live births registered, a decrease of 920 as compared with the number registered in 1962.

The allocated live births for 1963 numbered 111,217. The corresponding birth rate was 21.0 live births per 1,000 population. The Massachusetts birth rate was similar to that for the United States in 1963, the rate for the United States being 21.7 live births per 1,000 population.

Stillbirths. — Chapter 113, Acts of 1945, defines stillborn children for the purposes of Vital Statistics: "A stillborn child shall be deemed to be a foetus born after a period of gestation of not less than 20 weeks, in which foetus there is no attempt at respiration, no action of heart and no movement of voluntary muscle —." Previous to 1936 there was no statute defining a stillbirth, consequently many returns had been made which, under this definition, would not have been returned. The statute now clearly defines a stillbirth and precludes any misunderstanding as to what returns should be made.

The number of allocated stillbirths in Massachusetts in 1963 was 1,386. The stillbirth rate per 1,000 live births was 12.5. There were 12.3 stillbirths per 1,000 total births.

INTRODUCTION.

Marriage Registration. — The public registration of marriages has been required for many years in Massachusetts. Records of marriage are made in the first instance in the cities and towns of the State where the contracting parties dwell and if the ceremony is solemnized in a town other than where the parties reside, in the town where the ceremony is performed.

Since 1841 it has been required that copies of these records be forwarded annually to the Secretary of the Commonwealth, but many City and Town Clerks co-operate by making periodic returns throughout the year. From 1841 to 1963, inclusive, there have been 6,013,221 marriages reported, recorded and tabulated in this department.

Source of Data. — The marriage statistics in this report are compiled from attested copies of the records of marriages recorded in every city and town. Persons intending to be joined in marriage in Massachusetts must file a notice of intention in the town in which they respectively dwell, and this notice of intention must contain the facts required for record and be sworn to by each of the parties to the marriage. Chapter 561, Acts of 1943 provides that in cases of persons, one or both of whom is in the armed forces, such notice may be given by either party, provided one is a resident. If a marriage is performed in a town other than the town issuing the license, a copy of the license is required to be made and forwarded by the clergyman or magistrate to the clerk of the municipality in which the ceremony was performed. Five days after the notice of intention has been filed, unless a court waives the requirement, the marriage license may be issued with all the facts set forth in the notice of intention which are required for record. This certificate is presented to the clergyman or magistrate before whom the marriage is performed, and the facts as to the ceremony are certified by that person. Between the first and tenth days of the month following the ceremony the license or licenses are required to be returned by the clergyman or magistrate to the office or offices issuing the same.

Number of Marriages. — There was an increase in the number of marriages solemnized in 1963, 35,971, which was 2,414 more than in 1962. There were more marriages in 1963 than in any year since 1956. The marriage rate per 1,000 population, which had dropped from 14.2 persons married per 1,000 population to a low of 12.8 in 1962, rose to 13.6 in 1963.

Solemnization. — A marriage may be solemnized in any place within the Commonwealth by a minister of the gospel who resides in the Commonwealth, or, who if a nonresident is the pastor of a church or denomination duly established in the Commonwealth and who is recognized by his church or denomination as duly ordained and in good and regular standing as a minister of such church or denomination including ordained deacons in the Methodist Church; by a rabbi of the Israelitish faith, duly licensed by a congregation of said faith established in the Commonwealth, who has filed with the clerk or registrar of the city or town where such congregation is established a certificate of the establishment of the synagogue therein, the date of his appointment thereto, and of the term of his engagement; by a justice of the peace if he is also clerk or assistant clerk of a city or town, or a registrar or assistant registrar, in the city or town where he holds such office, or, if he is also clerk or assistant clerk of a court, in the city or town where the court

is authorized to be held, or, if he has been designated as a justice of the peace to solemnize marriages in the city or town where he resides; and it may be solemnized among Friends or Quakers according to the usages of their societies; and it may be solemnized among the Baha'is, by the Chairman of an incorporated local spiritual assembly of the Baha'is according to the usage of their society; and a specified marriage may be performed by a nonresident clergyman commissioned by the Governor in accordance with the provisions of General Laws, Chap. 207, Sec. 39; but no person shall solemnize a marriage in the Commonwealth unless he can read and write the English language.

Section 33 of Chapter 207 of General Laws (Ter. Ed.) as amended provides for filing evidence of marriage of residents of Massachusetts who have been married in another State or without the United States, with the city or town clerk of their place of domicile at the time of the marriage.

Section 28A of Chapter 207 of the General Laws (Ter. Ed.) as amended provides for premarital blood examination. Certificates of medical examinations must be presented by both parties to the intended marriage before the marriage certificate is issued.

Accuracy. — Every precaution has been taken to see that the statutes pertaining to the solemnization of marriage are strictly enforced, but as there is no public registration of ministers of the gospel in Massachusetts, it is not always possible to get in touch with the persons responsible for making returns of marriages solemnized by them. To guard against the possibility of marriages being performed on one license where two are required, on an out-of-state license, or on a license that has become invalid because of lapse of time, copies have been prepared of the marriage laws and are forwarded, upon request, to all persons interested, and are sent to the city and town clerks, together with posters setting forth the legal impediments to marriage, which are required to be posted in their offices.

The errors in solemnizing and returning a record of marriage, if any, are due to the lack of information as to the requirements of the statute rather than to any wilful attempt to evade the requirements of the law.

Marriage licenses issued to residents are valid throughout the Commonwealth, regardless of the residence of either party and many marriages are performed in cities and towns other than the place where either party lived. Persons who do not reside in the Commonwealth must file their intention with the clerk of the city or town where they propose to have the marriage solemnized and the marriage must be solemnized in that particular municipality.

The principal source of error in the records of marriage comes about through the carelessness or ignorance of one of the parties in filing the notice of intention as to the facts concerning the other party. These certificates are compared in the Division of Vital Statistics and every effort is made to have the certificates agree, but considerable confusion and delay follow from this situation.

Purpose. — The practical purposes of marriage records are:

1. As evidence to establish dower and curtesy rights of husband and wife.
2. To prove legality as to claims of inheritance.
3. As evidence upon which to base subsequent records concerning the parties.
4. For Governmental pension purposes.
5. For pensions under Employees Pension Laws.
6. For insurance, pension and retirement purposes.
7. To establish legal settlement for public aid and the settlement of dependent children of parents.
8. For naturalization and passport purposes.
9. To prove legitimacy of children.

INTRODUCTION.

Causes for Divorce. — Causes for which divorce from the bonds of matrimony may be granted in Massachusetts under the provisions of Chapter 208, Sections 1 and 2 of the General Laws (Ter. Ed.) as amended, are as follows:—

1. Adultery.
2. Impotency.
3. Desertion for three consecutive years next prior to the filing of the libel.
4. Gross and confirmed habits of intoxication caused by the voluntary and excessive use of intoxicating liquor, opium or other drugs.
5. Cruel and abusive treatment.
6. Neglect to provide.
7. Sentence to imprisonment at hard labor for five years or more.

A marriage may be declared void in consequence of violation of the provisions of the laws concerning marriage; that is, a separation may be granted because of the demonstration of conditions obtaining at the time of, or previous to, the alleged marriage, which show that there never was a legal marriage.

Source of Data. — The statistics of divorce presented in this report are compiled from returns made to the Secretary of the Commonwealth annually by the clerks of courts and registers of probate for the several counties.

Since 1952 the names and addresses of divorced persons have been returned to the Secretary of the Commonwealth by the courts.

The Probate Court and the Superior Court have concurrent jurisdiction to hear libels for divorce and to determine the same in a similar manner.

Applications for Divorce. — The courts granted four petitions out of every five filed. This proportion fluctuated during the 25 years from 1939 to 1963, the highest proportion of applications being granted in 1940 (90.7 per cent), and the lowest proportion in 1952 (84.1 per cent).

Contested Cases. — Of the total number of applications for divorces during the 25 years from 1939 to 1963, only 35.0 per cent were contested. In 1963, of the 6,704 applications for divorce, only 2,664 or 39.7 per cent were contested.

Number of Divorces. — Divorces granted in 1963 numbered 5,950, a decrease of 225 from the number granted in 1962, but 289 more than the average number granted for the five-year period 1958 to 1962.

Party to Which Granted. — Over three-fourths (76.5 per cent) of the total number of divorces in the period 1939 to 1963 were granted to the wife. The difference may be partially explained by the fact that the wife has more legal grounds for divorce than the husband, because certain grounds are more readily applicable against the husband than against the wife. For example, neglect to provide, a common legal cause for divorce on the part of the wife, is not ordinarily an available ground for a husband.

Divorces Classified by Causes. — The statistics concerning the cause of divorce deal with the legal cause as ascertained from the court records. The most common ground on which divorce was granted by the courts was cruel and abusive treatment. The number of divorces granted for all causes and each statutory cause of divorce from 1939 to 1963 are shown in Table 59.

Duration of Marriages. — Of the libellants to whom divorces were granted in 1963, 3.3 per cent were married less than one year and 32.1 per cent were married less than five years. Detailed information on the duration of marriage is given in Table 63.

POPULATION STATISTICS

	PAGE
Introduction	119
Statistical tables	120, 121

Introduction. — Vital statistics are most useful when they are presented in relation to the population. The data on births, deaths, marriages or divorces occurring in a group during the calendar year are then expressed as rates per 1,000 members of the group. The group under consideration may be the entire population of the Commonwealth, or a smaller group, such as a specified age or occupational group. Rates per 10,000 or per 100,000 members of the group may also be used.

Information regarding population is obtained by a census enumeration, and in Massachusetts these enumerations are made every five years. The census population for each municipality in the Commonwealth having over 15,000 inhabitants in 1960 is given in Table 65 for census years from 1940 to 1960. Table 66 gives the population of Massachusetts by age and sex as enumerated in the census of 1960.

The population of any community is continually changing, and for this reason it is necessary to make estimates of the population upon which to base rates for the various vital events for the periods between census enumerations.

Rates for 1963 in this book are based on a population of 5,296,000 for the Commonwealth of Massachusetts, as estimated by the U.S. Bureau of the Census. Rates for non-census years prior to 1963 are based upon the estimated population as determined by the arithmetical method, which assumes a constant amount of increase between the census years. This assumption can give misleading estimates, and for this reason was dropped in 1963. However, since the rates for years prior to 1963 are based on population estimates determined by the arithmetical method, and illustration of the method is presented below.

The method of calculating estimates of population for the intercensal years prior to 1963 is shown in the following example:

Massachusetts had a population of 5,148,578 at the Federal census of 1960 (April 1), and of 4,690,514 at the Federal census of 1950 (April 1). The increase during the intercensal period (120 months) was 458,064, and the monthly increase according to the arithmetical method of estimating population, was —

$$\frac{5,148,578 - 4,690,514}{120} = 3,817.2$$

The same annual increase is also assumed to occur until the next census shall have been taken. The population for July 1, 1960 is estimated by adding to the population as it existed at the preceding census (April 1, 1960), 3,817.2 for each month intervening between the date of enumeration and the date for which the estimate is desired (July 1, 1961). There being 3 months between these dates, the calculation would be

$$5,148,578 + (27 \times 3,817.2) = 5,251,642.$$
